

# Red Light Therapy vs Botox and Facelifts

**AVOID FILLERS, BOTOX & PLASTIC SURGERY**

**Botox and facelifts clearly deliver fast result vs red light therapy treatments. These results do come with a price; They both can have side-effects and are way more expensive.**

**Red light therapy treatments, on the other hand, are known to be safer, more cost-effective, and not as harsh.**

**We always recommend trying the ‘natural’ or less invasive way first, which is using red light therapy.**

**In most cases, you will see a difference after using it for a few short weeks, and it will save you thousands of dollars.**

**Another great point to consider, if you are getting botox regularly, using red-light therapy will prolong the results of botox.**

**When compared to the alternatives (surgical face and neck lifts) there’s no question; this is a way cheaper, safer way, especially treating aging skin.**

*Most customers have experienced a significant change to their skin between 4 to 8 weeks of treatment. You will need to continue treatment consistently, (once a week - once a month, depending on your skin) to see results.*
